

PROFILES

RABBETED BEVEL

Horizontal **installation** only.

A **more traditional** profile. The triangular shape adds a **multi-dimensional** aspect to the siding.

This profile **best conceals installation gaps** or potential future movements.

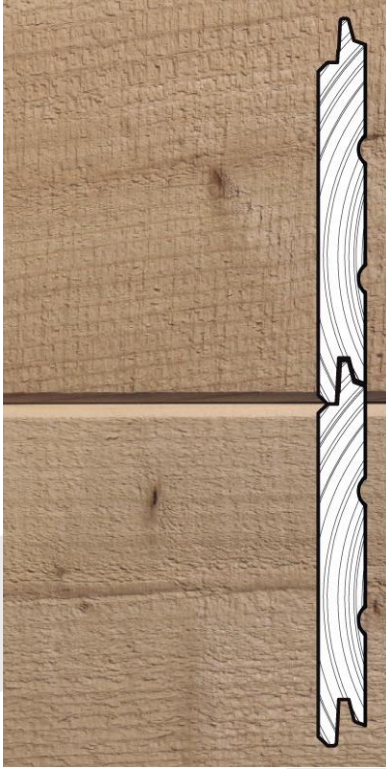

CHIC

Vertical and horizontal **installation.**

Highly versatile profile that suits all architectural styles.

The square groove in the wood's double negative slope joint **eases water drainage.**

V-JOINT

Vertical and horizontal **installation.**

Flat, **modern and minimalist** profile. This closed joint presents a small "V".

The closed joint makes all installation gaps or possible future movements more obvious.
